Teacher Guide

Level: Grade 4 • California

Standard / objective: CA CCSS.MATH.CONTENT.4.NBT.B.4 — Fluently add and subtract multi-digit whole numbers using the standard algorithm.

Source / course note: California Department of Education:
<https://www2.cde.ca.gov/cacs/math?c2=4%2C1%2C1%2C2>

Before this lesson: Read whole numbers to 100,000 and identify place values.

Model and discuss: Model $40,003 - 18,756 = 21,247$. Rename across the zeros, subtract by place, then check that $21,247 + 18,756 = 40,003$.

Watch for: Subtracting the smaller digit from the larger digit in each column ignores place value. Ask the learner to show the renamed number.

Suggested sequence: 5-minute launch, 10-minute model, 20-30 minutes of practice, then a 5-minute exit ticket. Use separate paper for extended writing.

Learning supports

AIG: Create two different subtraction problems with the same difference and justify both.

504: Offer chunked tasks, reduced copying, extra time, and breaks as specified in the learner's plan.

EC: Use a place-value chart and counters to represent regrouping before recording digits.

ESL: Rehearse: I regrouped one ___ as ten ___. Preteach sum, difference, and estimate.

Adapt these suggestions to the current learning plan. Print on US Letter paper at actual size; keep the key separate. One teacher may use the resource with their own students; no public posting or resale.

Student Directions & Practice

Use place value to estimate, add, subtract, and check multi-digit whole-number calculations.

Directions: Complete every item. Show work or cite evidence. For open responses, answer in complete sentences.

- 1.** Estimate $38,472 + 16,905$ to the nearest thousand.

- 2.** $46,728 + 9,563$

- 3.** $80,004 - 27,856$

- 4.** A library had 48,736 books and added 6,895. How many now?

- 5.** A stadium has 72,450 seats; 58,967 were filled. How many empty?

- 6.** Find and correct: $63,210 - 18,475 = 45,835$.

- 7.** Write a four-digit addition problem with a sum greater than 12,000. Solve it.

- 8.** Explain how addition can check subtraction.

Assessment / Exit Ticket

Work independently. Show your reasoning. Use extra paper if needed.

1. Solve $60,002 - 24,785$. Show regrouping.
2. Check your difference using addition and explain why the check works.

Reflection: What helped you decide? What do you want to practice next?

Score each task: 2 = accurate with clear reasoning; 1 = partly correct or missing reasoning; 0 = incorrect or no evidence. The reflection is not scored.

Answer Key & Teaching Guidance

1. 55,000
2. 56,291
3. 52,148
4. 55,631
5. 13,483
6. Correct answer: 44,735; the shown result is 1,100 too large.
7. Answers vary; example $7,250 + 5,100 = 12,350$.
8. Add the difference to the subtrahend; the result should equal the minuend.

Exit ticket guidance

1. 35,217. The written work must preserve place value through the zeros.
2. $35,217 + 24,785 = 60,002$. Addition reverses subtraction.

Next teaching move: Use the worked model again if the concept is unclear. If the answer is correct but reasoning is incomplete, ask for an explanation. Offer the extension once both tasks are secure. Scores guide instruction; they are not standardized mastery cutoffs.
