Teacher Guide

Level: College • Introductory Accounting

Standard / objective: Course objective — Analyze transactions using the accounting equation and explain changes in assets, liabilities, and equity.

Source / course note: Course-level objective; no accreditation or universal equivalency claimed.

Before this lesson: Identify assets, liabilities, revenue, and expenses.

Model and discuss: Owner investment of \$8,000 increases cash and owner equity equally. Buying equipment for \$1,200 cash changes asset composition, not total assets.

Watch for: A cash payment is not always an expense: purchasing equipment exchanges one asset for another.

Suggested sequence: 5-minute launch, 10-minute model, 20-30 minutes of practice, then a 5-minute exit ticket. Use separate paper for extended writing.

Learning supports

AIG: Add a new transaction that changes assets and liabilities without changing equity.

504: Offer chunked tasks, reduced copying, extra time, and breaks as specified in the learner's plan.

EC: Use an Assets = Liabilities + Equity table with one row per transaction.

ESL: Rehearse: ___ increases/decreases by ___, so the equation stays balanced.

Adapt these suggestions to the current learning plan. Print on US Letter paper at actual size; keep the key separate. One teacher may use the resource with their own students; no public posting or resale.

Student Directions & Practice

Track assets, liabilities, and equity through original small-business scenarios.

Directions: Complete every item. Show work or cite evidence. For open responses, answer in complete sentences.

- 1.** Owner invests \$8,000 cash. State equation effect.

- 2.** Buy \$1,200 equipment for cash.

- 3.** Purchase \$500 supplies on account.

- 4.** Earn \$900 cash revenue.

- 5.** Pay \$200 of accounts payable.

- 6.** Pay \$300 rent.

- 7.** Compute ending assets after all six transactions.

- 8.** Compute ending liabilities and equity.

Assessment / Exit Ticket

Work independently. Show your reasoning. Use extra paper if needed.

1. Starting from zero, an owner invests \$2,000 cash and buys \$300 supplies on account. Find assets, liabilities, and equity.

2. The business pays \$100 of the amount owed. Recalculate all three totals.

Reflection: What helped you decide? What do you want to practice next?

Score each task: 2 = accurate with clear reasoning; 1 = partly correct or missing reasoning; 0 = incorrect or no evidence. The reflection is not scored.

Answer Key & Teaching Guidance

1. Assets +8,000; equity +8,000.
2. Cash –1,200; equipment +1,200; total assets unchanged.
3. Assets +500; liabilities +500.
4. Assets +900; equity +900.
5. Assets –200; liabilities –200.
6. Assets –300; equity –300.
7. Assets \$8,900.
8. Liabilities \$300; equity \$8,600.

Exit ticket guidance

1. Assets \$2,300; liabilities \$300; equity \$2,000.
2. Assets \$2,200; liabilities \$200; equity \$2,000. Cash and accounts payable each decrease \$100.

Next teaching move: Use the worked model again if the concept is unclear. If the answer is correct but reasoning is incomplete, ask for an explanation. Offer the extension once both tasks are secure. Scores guide instruction; they are not standardized mastery cutoffs.
