

Partial Products, Clear Thinking Teaching Bundle

Grade 4 • North Carolina • Mathematics

NC.4.NBT.5 • Connect area models with partial products.

A focused classroom collection: task cards, five warm-ups, classwork, an exit ticket, four seasonal practice sets, substitute lessons, and planning pages. Each section has worked answers.

PRINT • TEACH • REVISIT

Your teaching route

Focus

Connect area models with partial products. This bundle practices a focused part of NC.4.NBT.5; it is not a complete grade curriculum or a simulated EOG.

Before teaching

Learners should explain a simpler example using a model. Read the two worked examples, then use the first task card to check readiness.

Suggested sequence

Day 1: model for 10 minutes, then guided task cards for 15 minutes. Day 2: a 5-minute warm-up and 20 minutes of practice. Use the exit ticket to choose a small-group reteaching focus. Seasonal sets revisit the same skill using different quantities.

Materials

Pencils, blank paper, and graph paper or counters as useful. No paid app or internet is needed for student work. A calculator may check finished calculations; these are instructional choices, not official testing accommodation rules.

Make the reasoning visible

Split a factor by place value. Multiply each part and combine partial products. Label the pieces in an area model.

Example 1: The library team packs 182 cards in each of 3 boxes. Find the total. Show partial products and explain why they can be added.

$(180 \times 3) + (2 \times 3) = 540 + 6 = 546$. The parts account for every box or card exactly once.

Example 2: The reading group packs 341 cards in each of 3 boxes. Find the total. Show partial products and explain why they can be added.

$(340 \times 3) + (1 \times 3) = 1020 + 3 = 1023$. The parts account for every box or card exactly once.

Ask: What does each number represent? How could a model or inverse operation check the result?

Task cards 1–4

Read, represent, solve, and explain. Record full reasoning on the response page or separate paper.

CARD 01

The music club packs 27 cards in each of 29 boxes. Find the total. Show partial products and explain why they can be added.

Explain your method.

CARD 02

The design team packs 16 cards in each of 22 boxes. Find the total. Show partial products and explain why they can be added.

Explain your method.

CARD 03

The school garden packs 248 cards in each of 3 boxes. Find the total. Show partial products and explain why they can be added.

Explain your method.

CARD 04

The science club packs 233 cards in each of 4 boxes. Find the total. Show partial products and explain why they can be added.

Explain your method.

Task cards 5–8

Read, represent, solve, and explain. Record full reasoning on the response page or separate paper.

CARD 05

The reading group packs 94 cards in each of 23 boxes. Find the total. Show partial products and explain why they can be added.

Explain your method.

CARD 06

The art club packs 22 cards in each of 22 boxes. Find the total. Show partial products and explain why they can be added.

Explain your method.

CARD 07

The design team packs 200 cards in each of 5 boxes. Find the total. Show partial products and explain why they can be added.

Explain your method.

CARD 08

The library team packs 279 cards in each of 3 boxes. Find the total. Show partial products and explain why they can be added.

Explain your method.

Task cards 9–12

Read, represent, solve, and explain. Record full reasoning on the response page or separate paper.

CARD 09

The reading group packs 90 cards in each of 19 boxes. Find the total. Show partial products and explain why they can be added.

Explain your method.

CARD 10

The reading group packs 73 cards in each of 25 boxes. Find the total. Show partial products and explain why they can be added.

Explain your method.

CARD 11

The reading group packs 198 cards in each of 3 boxes. Find the total. Show partial products and explain why they can be added.

Explain your method.

CARD 12

The reading group packs 347 cards in each of 5 boxes. Find the total. Show partial products and explain why they can be added.

Explain your method.

Task cards 13–16

Read, represent, solve, and explain. Record full reasoning on the response page or separate paper.

CARD 13

The reading group packs 59 cards in each of 16 boxes. Find the total. Show partial products and explain why they can be added.

Explain your method.

CARD 14

The science club packs 34 cards in each of 27 boxes. Find the total. Show partial products and explain why they can be added.

Explain your method.

CARD 15

The school garden packs 146 cards in each of 7 boxes. Find the total. Show partial products and explain why they can be added.

Explain your method.

CARD 16

The design team packs 109 cards in each of 4 boxes. Find the total. Show partial products and explain why they can be added.

Explain your method.

Task-card response record

Warm-up • Day 1

Work for about five minutes. Compare one method with a partner. Complete unfinished reasoning during review.

1. The music club packs 179 cards in each of 8 boxes. Find the total. Show partial products and explain why they can be added.

2. The art club packs 334 cards in each of 8 boxes. Find the total. Show partial products and explain why they can be added.

Warm-up • Day 2

Work for about five minutes. Compare one method with a partner. Complete unfinished reasoning during review.

3. The art club packs 58 cards in each of 19 boxes. Find the total. Show partial products and explain why they can be added.

4. The music club packs 37 cards in each of 24 boxes. Find the total. Show partial products and explain why they can be added.

Warm-up • Day 3

Work for about five minutes. Compare one method with a partner. Complete unfinished reasoning during review.

5. The art club packs 346 cards in each of 2 boxes. Find the total. Show partial products and explain why they can be added.

6. The music club packs 120 cards in each of 4 boxes. Find the total. Show partial products and explain why they can be added.

Warm-up • Day 4

Work for about five minutes. Compare one method with a partner. Complete unfinished reasoning during review.

7. The community center packs 58 cards in each of 15 boxes. Find the total. Show partial products and explain why they can be added.

8. The science club packs 77 cards in each of 17 boxes. Find the total. Show partial products and explain why they can be added.

Warm-up • Day 5

Work for about five minutes. Compare one method with a partner. Complete unfinished reasoning during review.

9. The community center packs 218 cards in each of 8 boxes. Find the total. Show partial products and explain why they can be added.

10. The art club packs 199 cards in each of 7 boxes. Find the total. Show partial products and explain why they can be added.

Classwork • Represent and explain

Show your thinking with a drawing, equation, or explanation. Use the space under each question.

1. The art club packs 375 cards in each of 2 boxes. Find the total. Show partial products and explain why they can be added.

2. The community center packs 371 cards in each of 9 boxes. Find the total. Show partial products and explain why they can be added.

3. The design team packs 34 cards in each of 24 boxes. Find the total. Show partial products and explain why they can be added.

Classwork • Represent and explain

Show your thinking with a drawing, equation, or explanation. Use the space under each question.

4. The music club packs 90 cards in each of 19 boxes. Find the total. Show partial products and explain why they can be added.

5. The art club packs 376 cards in each of 8 boxes. Find the total. Show partial products and explain why they can be added.

6. The reading group packs 139 cards in each of 4 boxes. Find the total. Show partial products and explain why they can be added.

Exit ticket • Try independently

Complete the four questions independently. Show enough reasoning for your teacher to see your method. This is a classroom check, not a standardized score.

1. The library team packs 191 cards in each of 4 boxes. Find the total. Show partial products and explain why they can be added.

2. The library team packs 203 cards in each of 8 boxes. Find the total. Show partial products and explain why they can be added.

3. The community center packs 76 cards in each of 22 boxes. Find the total. Show partial products and explain why they can be added.

4. The design team packs 50 cards in each of 17 boxes. Find the total. Show partial products and explain why they can be added.

Task-card worked solutions

1. 783

$27 \times 20 + 27 \times 9 = 540 + 243 = 783$. The parts account for every box or card exactly once.

2. 352

$16 \times 20 + 16 \times 2 = 320 + 32 = 352$. The parts account for every box or card exactly once.

3. 744

$(240 \times 3) + (8 \times 3) = 720 + 24 = 744$. The parts account for every box or card exactly once.

4. 932

$(230 \times 4) + (3 \times 4) = 920 + 12 = 932$. The parts account for every box or card exactly once.

5. 2162

$94 \times 20 + 94 \times 3 = 1880 + 282 = 2162$. The parts account for every box or card exactly once.

6. 484

$22 \times 20 + 22 \times 2 = 440 + 44 = 484$. The parts account for every box or card exactly once.

Task-card worked solutions

7. 1000

$(200 \times 5) + (0 \times 5) = 1000 + 0 = 1000$. The parts account for every box or card exactly once.

8. 837

$(270 \times 3) + (9 \times 3) = 810 + 27 = 837$. The parts account for every box or card exactly once.

9. 1710

$90 \times 10 + 90 \times 9 = 900 + 810 = 1710$. The parts account for every box or card exactly once.

10. 1825

$73 \times 20 + 73 \times 5 = 1460 + 365 = 1825$. The parts account for every box or card exactly once.

11. 594

$(190 \times 3) + (8 \times 3) = 570 + 24 = 594$. The parts account for every box or card exactly once.

12. 1735

$(340 \times 5) + (7 \times 5) = 1700 + 35 = 1735$. The parts account for every box or card exactly once.

Task-card worked solutions

13. 944

$59 \times 10 + 59 \times 6 = 590 + 354 = 944$. The parts account for every box or card exactly once.

14. 918

$34 \times 20 + 34 \times 7 = 680 + 238 = 918$. The parts account for every box or card exactly once.

15. 1022

$(140 \times 7) + (6 \times 7) = 980 + 42 = 1022$. The parts account for every box or card exactly once.

16. 436

$(100 \times 4) + (9 \times 4) = 400 + 36 = 436$. The parts account for every box or card exactly once.

Warm-up worked solutions

1. 1432

$(170 \times 8) + (9 \times 8) = 1360 + 72 = 1432$. The parts account for every box or card exactly once.

2. 2672

$(330 \times 8) + (4 \times 8) = 2640 + 32 = 2672$. The parts account for every box or card exactly once.

3. 1102

$58 \times 10 + 58 \times 9 = 580 + 522 = 1102$. The parts account for every box or card exactly once.

4. 888

$37 \times 20 + 37 \times 4 = 740 + 148 = 888$. The parts account for every box or card exactly once.

5. 692

$(340 \times 2) + (6 \times 2) = 680 + 12 = 692$. The parts account for every box or card exactly once.

6. 480

$(120 \times 4) + (0 \times 4) = 480 + 0 = 480$. The parts account for every box or card exactly once.

Warm-up worked solutions

7. 870

$58 \times 10 + 58 \times 5 = 580 + 290 = 870$. The parts account for every box or card exactly once.

8. 1309

$77 \times 10 + 77 \times 7 = 770 + 539 = 1309$. The parts account for every box or card exactly once.

9. 1744

$(210 \times 8) + (8 \times 8) = 1680 + 64 = 1744$. The parts account for every box or card exactly once.

10. 1393

$(190 \times 7) + (9 \times 7) = 1330 + 63 = 1393$. The parts account for every box or card exactly once.

Classwork worked solutions

1. 750

$(370 \times 2) + (5 \times 2) = 740 + 10 = 750$. The parts account for every box or card exactly once.

2. 3339

$(370 \times 9) + (1 \times 9) = 3330 + 9 = 3339$. The parts account for every box or card exactly once.

3. 816

$34 \times 20 + 34 \times 4 = 680 + 136 = 816$. The parts account for every box or card exactly once.

4. 1710

$90 \times 10 + 90 \times 9 = 900 + 810 = 1710$. The parts account for every box or card exactly once.

5. 3008

$(370 \times 8) + (6 \times 8) = 2960 + 48 = 3008$. The parts account for every box or card exactly once.

6. 556

$(130 \times 4) + (9 \times 4) = 520 + 36 = 556$. The parts account for every box or card exactly once.

Exit-ticket worked solutions

1. 764

$(190 \times 4) + (1 \times 4) = 760 + 4 = 764$. The parts account for every box or card exactly once.

2. 1624

$(200 \times 8) + (3 \times 8) = 1600 + 24 = 1624$. The parts account for every box or card exactly once.

3. 1672

$76 \times 20 + 76 \times 2 = 1520 + 152 = 1672$. The parts account for every box or card exactly once.

4. 850

$50 \times 10 + 50 \times 7 = 500 + 350 = 850$. The parts account for every box or card exactly once.

Fall • Skill revisit

Complete four questions per sitting, about 15–20 minutes. Review the worked examples if needed. Explain one answer to a classmate or adult.

1. The fall garden club packs 29 cards in each of 16 boxes. Find the total. Show partial products and explain why they can be added.

2. The September art display packs 60 cards in each of 27 boxes. Find the total. Show partial products and explain why they can be added.

3. The fall garden club packs 115 cards in each of 7 boxes. Find the total. Show partial products and explain why they can be added.

4. The leaf observation team packs 211 cards in each of 2 boxes. Find the total. Show partial products and explain why they can be added.

Fall • Skill revisit

Complete four questions per sitting, about 15–20 minutes. Review the worked examples if needed. Explain one answer to a classmate or adult.

5. The leaf observation team packs 77 cards in each of 12 boxes. Find the total. Show partial products and explain why they can be added.

6. The fall garden club packs 33 cards in each of 12 boxes. Find the total. Show partial products and explain why they can be added.

7. The autumn reading fair packs 361 cards in each of 6 boxes. Find the total. Show partial products and explain why they can be added.

8. The September art display packs 375 cards in each of 3 boxes. Find the total. Show partial products and explain why they can be added.

Fall • Worked solutions

1. 464

$29 \times 10 + 29 \times 6 = 290 + 174 = 464$. The parts account for every box or card exactly once.

2. 1620

$60 \times 20 + 60 \times 7 = 1200 + 420 = 1620$. The parts account for every box or card exactly once.

3. 805

$(110 \times 7) + (5 \times 7) = 770 + 35 = 805$. The parts account for every box or card exactly once.

4. 422

$(210 \times 2) + (1 \times 2) = 420 + 2 = 422$. The parts account for every box or card exactly once.

Fall • Worked solutions

5. 924

$77 \times 10 + 77 \times 2 = 770 + 154 = 924$. The parts account for every box or card exactly once.

6. 396

$33 \times 10 + 33 \times 2 = 330 + 66 = 396$. The parts account for every box or card exactly once.

7. 2166

$(360 \times 6) + (1 \times 6) = 2160 + 6 = 2166$. The parts account for every box or card exactly once.

8. 1125

$(370 \times 3) + (5 \times 3) = 1110 + 15 = 1125$. The parts account for every box or card exactly once.

Winter • Skill revisit

Complete four questions per sitting, about 15–20 minutes. Review the worked examples if needed. Explain one answer to a classmate or adult.

1. The January puzzle club packs 282 cards in each of 3 boxes. Find the total. Show partial products and explain why they can be added.

2. The December art display packs 235 cards in each of 8 boxes. Find the total. Show partial products and explain why they can be added.

3. The winter reading club packs 97 cards in each of 21 boxes. Find the total. Show partial products and explain why they can be added.

4. The winter supply drive packs 15 cards in each of 23 boxes. Find the total. Show partial products and explain why they can be added.

Winter • Skill revisit

Complete four questions per sitting, about 15–20 minutes. Review the worked examples if needed. Explain one answer to a classmate or adult.

5. The January puzzle club packs 298 cards in each of 3 boxes. Find the total. Show partial products and explain why they can be added.

6. The indoor garden project packs 383 cards in each of 5 boxes. Find the total. Show partial products and explain why they can be added.

7. The winter supply drive packs 74 cards in each of 21 boxes. Find the total. Show partial products and explain why they can be added.

8. The indoor garden project packs 60 cards in each of 12 boxes. Find the total. Show partial products and explain why they can be added.

Winter • Worked solutions

1. 846

$(280 \times 3) + (2 \times 3) = 840 + 6 = 846$. The parts account for every box or card exactly once.

2. 1880

$(230 \times 8) + (5 \times 8) = 1840 + 40 = 1880$. The parts account for every box or card exactly once.

3. 2037

$97 \times 20 + 97 \times 1 = 1940 + 97 = 2037$. The parts account for every box or card exactly once.

4. 345

$15 \times 20 + 15 \times 3 = 300 + 45 = 345$. The parts account for every box or card exactly once.

Winter • Worked solutions

5. 894

$(290 \times 3) + (8 \times 3) = 870 + 24 = 894$. The parts account for every box or card exactly once.

6. 1915

$(380 \times 5) + (3 \times 5) = 1900 + 15 = 1915$. The parts account for every box or card exactly once.

7. 1554

$74 \times 20 + 74 \times 1 = 1480 + 74 = 1554$. The parts account for every box or card exactly once.

8. 720

$60 \times 10 + 60 \times 2 = 600 + 120 = 720$. The parts account for every box or card exactly once.

Spring break • Skill revisit

Complete four questions per sitting, about 15–20 minutes. Review the worked examples if needed. Explain one answer to a classmate or adult.

1. The seedling club packs 94 cards in each of 17 boxes. Find the total. Show partial products and explain why they can be added.

2. The April science team packs 92 cards in each of 24 boxes. Find the total. Show partial products and explain why they can be added.

3. The spring reading fair packs 136 cards in each of 5 boxes. Find the total. Show partial products and explain why they can be added.

4. The spring book swap packs 376 cards in each of 9 boxes. Find the total. Show partial products and explain why they can be added.

Spring break • Skill revisit

Complete four questions per sitting, about 15–20 minutes. Review the worked examples if needed. Explain one answer to a classmate or adult.

5. The March art display packs 42 cards in each of 12 boxes. Find the total. Show partial products and explain why they can be added.

6. The spring reading fair packs 26 cards in each of 13 boxes. Find the total. Show partial products and explain why they can be added.

7. The spring book swap packs 222 cards in each of 7 boxes. Find the total. Show partial products and explain why they can be added.

8. The spring reading fair packs 183 cards in each of 8 boxes. Find the total. Show partial products and explain why they can be added.

Spring break • Worked solutions

1. 1598

$94 \times 10 + 94 \times 7 = 940 + 658 = 1598$. The parts account for every box or card exactly once.

2. 2208

$92 \times 20 + 92 \times 4 = 1840 + 368 = 2208$. The parts account for every box or card exactly once.

3. 680

$(130 \times 5) + (6 \times 5) = 650 + 30 = 680$. The parts account for every box or card exactly once.

4. 3384

$(370 \times 9) + (6 \times 9) = 3330 + 54 = 3384$. The parts account for every box or card exactly once.

Spring break • Worked solutions

5. 504

$42 \times 10 + 42 \times 2 = 420 + 84 = 504$. The parts account for every box or card exactly once.

6. 338

$26 \times 10 + 26 \times 3 = 260 + 78 = 338$. The parts account for every box or card exactly once.

7. 1554

$(220 \times 7) + (2 \times 7) = 1540 + 14 = 1554$. The parts account for every box or card exactly once.

8. 1464

$(180 \times 8) + (3 \times 8) = 1440 + 24 = 1464$. The parts account for every box or card exactly once.

Summer • Skill revisit

Complete four questions per sitting, about 15–20 minutes. Review the worked examples if needed. Explain one answer to a classmate or adult.

1. The June art workshop packs 359 cards in each of 2 boxes. Find the total. Show partial products and explain why they can be added.

2. The summer library club packs 325 cards in each of 4 boxes. Find the total. Show partial products and explain why they can be added.

3. The June art workshop packs 47 cards in each of 21 boxes. Find the total. Show partial products and explain why they can be added.

4. The community garden packs 97 cards in each of 26 boxes. Find the total. Show partial products and explain why they can be added.

Summer • Skill revisit

Complete four questions per sitting, about 15–20 minutes. Review the worked examples if needed. Explain one answer to a classmate or adult.

5. The summer library club packs 387 cards in each of 2 boxes. Find the total. Show partial products and explain why they can be added.

6. The June art workshop packs 364 cards in each of 4 boxes. Find the total. Show partial products and explain why they can be added.

7. The June art workshop packs 71 cards in each of 13 boxes. Find the total. Show partial products and explain why they can be added.

8. The June art workshop packs 13 cards in each of 16 boxes. Find the total. Show partial products and explain why they can be added.

Summer • Worked solutions

1. 718

$(350 \times 2) + (9 \times 2) = 700 + 18 = 718$. The parts account for every box or card exactly once.

2. 1300

$(320 \times 4) + (5 \times 4) = 1280 + 20 = 1300$. The parts account for every box or card exactly once.

3. 987

$47 \times 20 + 47 \times 1 = 940 + 47 = 987$. The parts account for every box or card exactly once.

4. 2522

$97 \times 20 + 97 \times 6 = 1940 + 582 = 2522$. The parts account for every box or card exactly once.

Summer • Worked solutions

5. 774

$(380 \times 2) + (7 \times 2) = 760 + 14 = 774$. The parts account for every box or card exactly once.

6. 1456

$(360 \times 4) + (4 \times 4) = 1440 + 16 = 1456$. The parts account for every box or card exactly once.

7. 923

$71 \times 10 + 71 \times 3 = 710 + 213 = 923$. The parts account for every box or card exactly once.

8. 208

$13 \times 10 + 13 \times 6 = 130 + 78 = 208$. The parts account for every box or card exactly once.

Substitute lesson

Before students arrive

Locate the class schedule, seating plan, emergency procedures, and approved learner supports from the school. This academic packet does not replace those school-specific instructions.

0-5 minutes: settle

Read the goal aloud: Connect area models with partial products. Let students explain a familiar strategy to a partner.

5-15 minutes: model

Use the worked-example page. Split a factor by place value. Multiply each part and combine partial products. Label the pieces in an area model.

15-30 minutes: practice

Distribute the next practice page. Students solve independently first, then compare one explanation in pairs. If copying is unavailable, read one question at a time and allow drawings or oral responses.

30-40 minutes: discuss

Use the following key. Ask students to locate the first step where methods diverged; invite a correction supported by a model.

40-45 minutes: handover

Collect one explanation from each student. On the planning page, record which step needs reteaching, who requested help, and what was completed. Use neutral observations, not diagnostic labels.

Substitute lesson • Practice

Show your thinking with a drawing, equation, or explanation. Use the space under each question.

1. The student design group packs 88 cards in each of 12 boxes. Find the total. Show partial products and explain why they can be added.

2. The school art team packs 59 cards in each of 22 boxes. Find the total. Show partial products and explain why they can be added.

3. The school art team packs 200 cards in each of 3 boxes. Find the total. Show partial products and explain why they can be added.

4. The library helpers packs 266 cards in each of 6 boxes. Find the total. Show partial products and explain why they can be added.

Substitute lesson • Worked solutions

1. 1056

$88 \times 10 + 88 \times 2 = 880 + 176 = 1056$. The parts account for every box or card exactly once.

2. 1298

$59 \times 20 + 59 \times 2 = 1180 + 118 = 1298$. The parts account for every box or card exactly once.

3. 600

$(200 \times 3) + (0 \times 3) = 600 + 0 = 600$. The parts account for every box or card exactly once.

4. 1596

$(260 \times 6) + (6 \times 6) = 1560 + 36 = 1596$. The parts account for every box or card exactly once.

Emergency substitute lesson

Before students arrive

Locate the class schedule, seating plan, emergency procedures, and approved learner supports from the school. This academic packet does not replace those school-specific instructions.

0-5 minutes: settle

Read the goal aloud: Connect area models with partial products. Let students explain a familiar strategy to a partner.

5-15 minutes: model

No copies or devices? Write the first worked example on the board; students use blank paper. Split a factor by place value. Multiply each part and combine partial products. Label the pieces in an area model.

15-30 minutes: practice

Distribute the next practice page. Students solve independently first, then compare one explanation in pairs. If copying is unavailable, read one question at a time and allow drawings or oral responses.

30-40 minutes: discuss

Use the following key. Ask students to locate the first step where methods diverged; invite a correction supported by a model.

40-45 minutes: handover

Collect one explanation from each student. On the planning page, record which step needs reteaching, who requested help, and what was completed. Use neutral observations, not diagnostic labels.

Emergency substitute lesson • Practice

Show your thinking with a drawing, equation, or explanation. Use the space under each question.

1. The desk-supply team packs 34 cards in each of 23 boxes. Find the total. Show partial products and explain why they can be added.

2. The paper puzzle team packs 50 cards in each of 17 boxes. Find the total. Show partial products and explain why they can be added.

3. The desk-supply team packs 321 cards in each of 8 boxes. Find the total. Show partial products and explain why they can be added.

4. The quiet design team packs 341 cards in each of 7 boxes. Find the total. Show partial products and explain why they can be added.

Emergency substitute lesson • Worked solutions

1. 782

$34 \times 20 + 34 \times 3 = 680 + 102 = 782$. The parts account for every box or card exactly once.

2. 850

$50 \times 10 + 50 \times 7 = 500 + 350 = 850$. The parts account for every box or card exactly once.

3. 2568

$(320 \times 8) + (1 \times 8) = 2560 + 8 = 2568$. The parts account for every box or card exactly once.

4. 2387

$(340 \times 7) + (1 \times 7) = 2380 + 7 = 2387$. The parts account for every box or card exactly once.

A completed lesson-plan example

Level and focus

Grade 4; NC.4.NBT.5; Connect area models with partial products.

Evidence of learning

Student represents the quantities, selects a valid method, calculates accurately, and explains the result with appropriate units.

Launch / model

Use worked example 1. Ask students to annotate the role of every quantity. Demonstrate the model before moving to symbols.

Guided / independent practice

Use cards 1-4 in pairs; assign classwork independently. Change grouping according to the explanation you hear rather than speed alone.

Formative check

Use the four-question exit ticket. Score each item 0-2: 2 for an accurate result with coherent reasoning, 1 for a sound method with a minor error or an unexplained correct result, 0 for missing or unsupported reasoning.

Next teaching decision

0-3 points: reteach with a concrete model. 4-6: correct the specific misconception with a short example. 7-8: invite a second representation or a student-created problem. These are local instructional decisions, not mastery cutoffs validated by a test publisher.

Plan your next lesson

Date, class, and focus / exact local standard:

What will students do to show understanding?

Launch and worked example:

Guided practice and independent task:

Access supports and extension:

Exit evidence and next lesson decision:

Access, sources, and classroom license

AIG: Invite two methods, a counterexample, or a new task with a specified solution. Ask students to explain limits of a shortcut.

504: Apply the student's plan: breaks, extra time, enlarged print, reduced copying, or alternate response methods as documented.

EC: Use the IEP to select supports. Model one step, offer counters or a diagram, reduce the visible item set, and accept an oral explanation when appropriate.

ESL: Preview quantity, difference, factor, or other relevant terms. Let students rehearse in a home language, then use "I chose ___ because ___." Maintain the mathematical goal.
