

Percent Benchmarks in Action

Grade 6 • Mathematics
NC.6.RP.4

Find parts using percent benchmarks.

What will a strong explanation show?

1. A model or equation that fits the quantities.
2. Accurate calculation with appropriate units.
3. A check that makes the answer reasonable.

Watch the reasoning

Of 60 supplies, 75% are set aside for a class project. How many are set aside? Show a benchmark-percent strategy.

75% = 75/100. $60 \times 75/100 = 45$. For example, 10% of 60 is 6; combine convenient benchmark parts.

Build a second model together

Of 40 supplies, 20% are set aside for a class project. How many are set aside? Show a benchmark-percent strategy.

Discuss: What should the first step find?

Your turn • 1

Of 80 supplies, 20% are set aside for a class project. How many are set aside? Show a benchmark-percent strategy.

Represent → solve → explain → check

Your turn • 2

Of 60 supplies, 50% are set aside for a class project. How many are set aside? Show a benchmark-percent strategy.

Represent → solve → explain → check

Your turn • 3

Of 160 supplies, 50% are set aside for a class project. How many are set aside? Show a benchmark-percent strategy.

Represent → solve → explain → check

Your turn • 4

Of 40 supplies, 30% are set aside for a class project. How many are set aside? Show a benchmark-percent strategy.

Represent → solve → explain → check

Exit question • Explain independently

Of 120 supplies, 75% are set aside for a class project. How many are set aside? Show a benchmark-percent strategy.

Include a check. What would you teach someone else?

Teacher review and next steps

1. 16

Exit: 90

2. 30

Use the worked PDF key and slide notes to discuss methods. Revisit the earliest unclear step before adding more practice.

3. 80

4. 12
