

Exponent Rules with Reasons Teaching Bundle

Grade 8 • North Carolina • Mathematics

NC.8.EE.1 • Generate equivalent exponential expressions.

A focused classroom collection: task cards, five warm-ups, classwork, an exit ticket, four seasonal practice sets, substitute lessons, and planning pages. Each section has worked answers.

PRINT • TEACH • REVISIT

Your teaching route

Focus

Generate equivalent exponential expressions. This bundle practices a focused part of NC.8.EE.1; it is not a complete grade curriculum or a simulated EOG.

Before teaching

Learners should explain a simpler example using a model. Read the two worked examples, then use the first task card to check readiness.

Suggested sequence

Day 1: model for 10 minutes, then guided task cards for 15 minutes. Day 2: a 5-minute warm-up and 20 minutes of practice. Use the exit ticket to choose a small-group reteaching focus. Seasonal sets revisit the same skill using different quantities.

Materials

Pencils, blank paper, and graph paper or counters as useful. No paid app or internet is needed for student work. A calculator may check finished calculations; these are instructional choices, not official testing accommodation rules.

Make the reasoning visible

Write small powers as repeated factors. Multiplying like bases adds exponents; dividing subtracts them when the base is nonzero.

Example 1: Simplify $2^7 \div 2^5$ as one power and evaluate it. Explain by canceling equal factors.

Cancel 5 nonzero factors from numerator and denominator. $7 - 5 = 2$ factors remain.

Example 2: Simplify $(4^5)(4^4)$ as one power and evaluate it. Explain using repeated factors.

There are $5 + 4 = 9$ factors of 4. Their product is 262144.

Ask: What does each number represent? How could a model or inverse operation check the result?

Task cards 1–4

Read, represent, solve, and explain. Record full reasoning on the response page or separate paper.

CARD 01

Simplify $2^5 \div 2^3$ as one power and evaluate it. Explain by canceling equal factors.

Explain your method.

CARD 02

Simplify $(2^5)(2^2)$ as one power and evaluate it. Explain using repeated factors.

Explain your method.

CARD 03

Simplify $5^4 \div 5^2$ as one power and evaluate it. Explain by canceling equal factors.

Explain your method.

CARD 04

Simplify $(5^4)(5^1)$ as one power and evaluate it. Explain using repeated factors.

Explain your method.

Task cards 5–8

Read, represent, solve, and explain. Record full reasoning on the response page or separate paper.

CARD 05

Simplify $5^9 \div 5^5$ as one power and evaluate it. Explain by canceling equal factors.

Explain your method.

CARD 06

Simplify $(5^2)(5^2)$ as one power and evaluate it. Explain using repeated factors.

Explain your method.

CARD 07

Simplify $2^8 \div 2^4$ as one power and evaluate it. Explain by canceling equal factors.

Explain your method.

CARD 08

Simplify $(4^5)(4^2)$ as one power and evaluate it. Explain using repeated factors.

Explain your method.

Task cards 9–12

Read, represent, solve, and explain. Record full reasoning on the response page or separate paper.

CARD 09

Simplify $3^6 \div 3^4$ as one power and evaluate it. Explain by canceling equal factors.

Explain your method.

CARD 10

Simplify $(5^2)(5^4)$ as one power and evaluate it. Explain using repeated factors.

Explain your method.

CARD 11

Simplify $2^9 \div 2^5$ as one power and evaluate it. Explain by canceling equal factors.

Explain your method.

CARD 12

Simplify $(5^4)(5^1)$ as one power and evaluate it. Explain using repeated factors.

Explain your method.

Task cards 13–16

Read, represent, solve, and explain. Record full reasoning on the response page or separate paper.

CARD 13

Simplify $5^4 \div 5^2$ as one power and evaluate it. Explain by canceling equal factors.

Explain your method.

CARD 14

Simplify $(5^2)(5^1)$ as one power and evaluate it. Explain using repeated factors.

Explain your method.

CARD 15

Simplify $4^4 \div 4^3$ as one power and evaluate it. Explain by canceling equal factors.

Explain your method.

CARD 16

Simplify $(3^2)(3^4)$ as one power and evaluate it. Explain using repeated factors.

Explain your method.

Task-card response record

Use this page for final answers; attach drawings or full worked solutions on separate paper.

Warm-up • Day 1

Work for about five minutes. Compare one method with a partner. Complete unfinished reasoning during review.

1. Simplify $4^3 \div 4^2$ as one power and evaluate it. Explain by canceling equal factors.

2. Simplify $(4^5)(4^1)$ as one power and evaluate it. Explain using repeated factors.

Warm-up • Day 2

Work for about five minutes. Compare one method with a partner. Complete unfinished reasoning during review.

3. Simplify $3^5 \div 3^3$ as one power and evaluate it. Explain by canceling equal factors.

4. Simplify $(2^5)(2^2)$ as one power and evaluate it. Explain using repeated factors.

Warm-up • Day 3

Work for about five minutes. Compare one method with a partner. Complete unfinished reasoning during review.

5. Simplify $3^7 \div 3^3$ as one power and evaluate it. Explain by canceling equal factors.

6. Simplify $(2^4)(2^1)$ as one power and evaluate it. Explain using repeated factors.

Warm-up • Day 4

Work for about five minutes. Compare one method with a partner. Complete unfinished reasoning during review.

7. Simplify $5^6 \div 5^2$ as one power and evaluate it. Explain by canceling equal factors.

8. Simplify $(3^4)(3^3)$ as one power and evaluate it. Explain using repeated factors.

Warm-up • Day 5

Work for about five minutes. Compare one method with a partner. Complete unfinished reasoning during review.

9. Simplify $5^5 \div 5^2$ as one power and evaluate it. Explain by canceling equal factors.

10. Simplify $(2^2)(2^2)$ as one power and evaluate it. Explain using repeated factors.

Classwork • Represent and explain

Show your thinking with a drawing, equation, or explanation. Use the space under each question.

1. Simplify $2^7 \div 2^3$ as one power and evaluate it. Explain by canceling equal factors.

2. Simplify $(5^4)(5^2)$ as one power and evaluate it. Explain using repeated factors.

3. Simplify $2^6 \div 2^4$ as one power and evaluate it. Explain by canceling equal factors.

Classwork • Represent and explain

Show your thinking with a drawing, equation, or explanation. Use the space under each question.

4. Simplify $(4^2)(4^1)$ as one power and evaluate it. Explain using repeated factors.

5. Simplify $3^5 \div 3^3$ as one power and evaluate it. Explain by canceling equal factors.

6. Simplify $(3^5)(3^4)$ as one power and evaluate it. Explain using repeated factors.

Exit ticket • Try independently

Complete the four questions independently. Show enough reasoning for your teacher to see your method. This is a classroom check, not a standardized score.

1. Simplify $2^6 \div 2^3$ as one power and evaluate it. Explain by canceling equal factors.

2. Simplify $(2^4)(2^2)$ as one power and evaluate it. Explain using repeated factors.

3. Simplify $3^7 \div 3^5$ as one power and evaluate it. Explain by canceling equal factors.

4. Simplify $(3^3)(3^1)$ as one power and evaluate it. Explain using repeated factors.

Task-card worked solutions

1. $2^2 = 4$

Cancel 3 nonzero factors from numerator and denominator. $5-3 = 2$ factors remain.

2. $2^7 = 128$

There are $5+2 = 7$ factors of 2. Their product is 128.

3. $5^2 = 25$

Cancel 2 nonzero factors from numerator and denominator. $4-2 = 2$ factors remain.

4. $5^5 = 3125$

There are $4+1 = 5$ factors of 5. Their product is 3125.

5. $5^4 = 625$

Cancel 5 nonzero factors from numerator and denominator. $9-5 = 4$ factors remain.

6. $5^4 = 625$

There are $2+2 = 4$ factors of 5. Their product is 625.

Task-card worked solutions

7. $2^4 = 16$

Cancel 4 nonzero factors from numerator and denominator. $8-4 = 4$ factors remain.

8. $4^7 = 16384$

There are $5+2 = 7$ factors of 4. Their product is 16384.

9. $3^2 = 9$

Cancel 4 nonzero factors from numerator and denominator. $6-4 = 2$ factors remain.

10. $5^6 = 15625$

There are $2+4 = 6$ factors of 5. Their product is 15625.

11. $2^4 = 16$

Cancel 5 nonzero factors from numerator and denominator. $9-5 = 4$ factors remain.

12. $5^5 = 3125$

There are $4+1 = 5$ factors of 5. Their product is 3125.

Task-card worked solutions

13. $5^2 = 25$

Cancel 2 nonzero factors from numerator and denominator. $4 - 2 = 2$ factors remain.

14. $5^3 = 125$

There are $2 + 1 = 3$ factors of 5. Their product is 125.

15. $4^1 = 4$

Cancel 3 nonzero factors from numerator and denominator. $4 - 3 = 1$ factors remain.

16. $3^6 = 729$

There are $2 + 4 = 6$ factors of 3. Their product is 729.

Warm-up worked solutions

1. $4^1 = 4$

Cancel 2 nonzero factors from numerator and denominator. $3 - 2 = 1$ factors remain.

2. $4^6 = 4096$

There are $5 + 1 = 6$ factors of 4. Their product is 4096.

3. $3^2 = 9$

Cancel 3 nonzero factors from numerator and denominator. $5 - 3 = 2$ factors remain.

4. $2^7 = 128$

There are $5 + 2 = 7$ factors of 2. Their product is 128.

5. $3^4 = 81$

Cancel 3 nonzero factors from numerator and denominator. $7 - 3 = 4$ factors remain.

6. $2^5 = 32$

There are $4 + 1 = 5$ factors of 2. Their product is 32.

Warm-up worked solutions

7. $5^4 = 625$

Cancel 2 nonzero factors from numerator and denominator. $6-2 = 4$ factors remain.

8. $3^7 = 2187$

There are $4+3 = 7$ factors of 3. Their product is 2187.

9. $5^3 = 125$

Cancel 2 nonzero factors from numerator and denominator. $5-2 = 3$ factors remain.

10. $2^4 = 16$

There are $2+2 = 4$ factors of 2. Their product is 16.

Classwork worked solutions

1. $2^4 = 16$

Cancel 3 nonzero factors from numerator and denominator. $7-3 = 4$ factors remain.

2. $5^6 = 15625$

There are $4+2 = 6$ factors of 5. Their product is 15625.

3. $2^2 = 4$

Cancel 4 nonzero factors from numerator and denominator. $6-4 = 2$ factors remain.

4. $4^3 = 64$

There are $2+1 = 3$ factors of 4. Their product is 64.

5. $3^2 = 9$

Cancel 3 nonzero factors from numerator and denominator. $5-3 = 2$ factors remain.

6. $3^9 = 19683$

There are $5+4 = 9$ factors of 3. Their product is 19683.

Exit-ticket worked solutions

1. $2^3 = 8$

Cancel 3 nonzero factors from numerator and denominator. $6-3 = 3$ factors remain.

2. $2^6 = 64$

There are $4+2 = 6$ factors of 2. Their product is 64.

3. $3^2 = 9$

Cancel 5 nonzero factors from numerator and denominator. $7-5 = 2$ factors remain.

4. $3^4 = 81$

There are $3+1 = 4$ factors of 3. Their product is 81.

Fall • Skill revisit

Complete four questions per sitting, about 15–20 minutes. Review the worked examples if needed. Explain one answer to a classmate or adult.

1. Simplify $4^7 \div 4^5$ as one power and evaluate it. Explain by canceling equal factors.

2. Simplify $(5^3)(5^1)$ as one power and evaluate it. Explain using repeated factors.

3. Simplify $5^4 \div 5^2$ as one power and evaluate it. Explain by canceling equal factors.

4. Simplify $(4^4)(4^1)$ as one power and evaluate it. Explain using repeated factors.

Fall • Skill revisit

Complete four questions per sitting, about 15–20 minutes. Review the worked examples if needed. Explain one answer to a classmate or adult.

5. Simplify $5^7 \div 5^4$ as one power and evaluate it. Explain by canceling equal factors.

6. Simplify $(5^4)(5^2)$ as one power and evaluate it. Explain using repeated factors.

7. Simplify $5^7 \div 5^4$ as one power and evaluate it. Explain by canceling equal factors.

8. Simplify $(5^2)(5^2)$ as one power and evaluate it. Explain using repeated factors.

Fall • Worked solutions

1. $4^2 = 16$

Cancel 5 nonzero factors from numerator and denominator. $7-5 = 2$ factors remain.

2. $5^4 = 625$

There are $3+1 = 4$ factors of 5. Their product is 625.

3. $5^2 = 25$

Cancel 2 nonzero factors from numerator and denominator. $4-2 = 2$ factors remain.

4. $4^5 = 1024$

There are $4+1 = 5$ factors of 4. Their product is 1024.

Fall • Worked solutions

5. $5^3 = 125$

Cancel 4 nonzero factors from numerator and denominator. $7-4 = 3$ factors remain.

6. $5^6 = 15625$

There are $4+2 = 6$ factors of 5. Their product is 15625.

7. $5^3 = 125$

Cancel 4 nonzero factors from numerator and denominator. $7-4 = 3$ factors remain.

8. $5^4 = 625$

There are $2+2 = 4$ factors of 5. Their product is 625.

Winter • Skill revisit

Complete four questions per sitting, about 15–20 minutes. Review the worked examples if needed. Explain one answer to a classmate or adult.

1. Simplify $5^4 \div 5^2$ as one power and evaluate it. Explain by canceling equal factors.

2. Simplify $(5^3)(5^2)$ as one power and evaluate it. Explain using repeated factors.

3. Simplify $5^9 \div 5^5$ as one power and evaluate it. Explain by canceling equal factors.

4. Simplify $(3^3)(3^4)$ as one power and evaluate it. Explain using repeated factors.

Winter • Skill revisit

Complete four questions per sitting, about 15–20 minutes. Review the worked examples if needed. Explain one answer to a classmate or adult.

5. Simplify $4^8 \div 4^5$ as one power and evaluate it. Explain by canceling equal factors.

6. Simplify $(2^3)(2^3)$ as one power and evaluate it. Explain using repeated factors.

7. Simplify $2^4 \div 2^2$ as one power and evaluate it. Explain by canceling equal factors.

8. Simplify $(5^2)(5^4)$ as one power and evaluate it. Explain using repeated factors.

Winter • Worked solutions

1. $5^2 = 25$

Cancel 2 nonzero factors from numerator and denominator. $4 - 2 = 2$ factors remain.

2. $5^5 = 3125$

There are $3 + 2 = 5$ factors of 5. Their product is 3125.

3. $5^4 = 625$

Cancel 5 nonzero factors from numerator and denominator. $9 - 5 = 4$ factors remain.

4. $3^7 = 2187$

There are $3 + 4 = 7$ factors of 3. Their product is 2187.

Winter • Worked solutions

5. $4^3 = 64$

Cancel 5 nonzero factors from numerator and denominator. $8-5 = 3$ factors remain.

6. $2^6 = 64$

There are $3+3 = 6$ factors of 2. Their product is 64.

7. $2^2 = 4$

Cancel 2 nonzero factors from numerator and denominator. $4-2 = 2$ factors remain.

8. $5^6 = 15625$

There are $2+4 = 6$ factors of 5. Their product is 15625.

Spring break • Skill revisit

Complete four questions per sitting, about 15–20 minutes. Review the worked examples if needed. Explain one answer to a classmate or adult.

1. Simplify $3^6 \div 3^4$ as one power and evaluate it. Explain by canceling equal factors.

2. Simplify $(5^2)(5^4)$ as one power and evaluate it. Explain using repeated factors.

3. Simplify $3^7 \div 3^4$ as one power and evaluate it. Explain by canceling equal factors.

4. Simplify $(4^5)(4^2)$ as one power and evaluate it. Explain using repeated factors.

Spring break • Skill revisit

Complete four questions per sitting, about 15–20 minutes. Review the worked examples if needed. Explain one answer to a classmate or adult.

5. Simplify $5^6 \div 5^4$ as one power and evaluate it. Explain by canceling equal factors.

6. Simplify $(3^2)(3^4)$ as one power and evaluate it. Explain using repeated factors.

7. Simplify $4^6 \div 4^3$ as one power and evaluate it. Explain by canceling equal factors.

8. Simplify $(3^5)(3^2)$ as one power and evaluate it. Explain using repeated factors.

Spring break • Worked solutions

1. $3^2 = 9$

Cancel 4 nonzero factors from numerator and denominator. $6-4 = 2$ factors remain.

2. $5^6 = 15625$

There are $2+4 = 6$ factors of 5. Their product is 15625.

3. $3^3 = 27$

Cancel 4 nonzero factors from numerator and denominator. $7-4 = 3$ factors remain.

4. $4^7 = 16384$

There are $5+2 = 7$ factors of 4. Their product is 16384.

Spring break • Worked solutions

5. $5^2 = 25$

Cancel 4 nonzero factors from numerator and denominator. $6-4 = 2$ factors remain.

6. $3^6 = 729$

There are $2+4 = 6$ factors of 3. Their product is 729.

7. $4^3 = 64$

Cancel 3 nonzero factors from numerator and denominator. $6-3 = 3$ factors remain.

8. $3^7 = 2187$

There are $5+2 = 7$ factors of 3. Their product is 2187.

Summer • Skill revisit

Complete four questions per sitting, about 15–20 minutes. Review the worked examples if needed. Explain one answer to a classmate or adult.

1. Simplify $5^6 \div 5^3$ as one power and evaluate it. Explain by canceling equal factors.

2. Simplify $(4^4)(4^4)$ as one power and evaluate it. Explain using repeated factors.

3. Simplify $3^9 \div 3^5$ as one power and evaluate it. Explain by canceling equal factors.

4. Simplify $(2^3)(2^1)$ as one power and evaluate it. Explain using repeated factors.

Summer • Skill revisit

Complete four questions per sitting, about 15–20 minutes. Review the worked examples if needed. Explain one answer to a classmate or adult.

5. Simplify $3^6 \div 3^4$ as one power and evaluate it. Explain by canceling equal factors.

6. Simplify $(4^3)(4^4)$ as one power and evaluate it. Explain using repeated factors.

7. Simplify $3^5 \div 3^2$ as one power and evaluate it. Explain by canceling equal factors.

8. Simplify $(2^2)(2^1)$ as one power and evaluate it. Explain using repeated factors.

Summer • Worked solutions

1. $5^3 = 125$

Cancel 3 nonzero factors from numerator and denominator. $6-3 = 3$ factors remain.

2. $4^8 = 65536$

There are $4+4 = 8$ factors of 4. Their product is 65536.

3. $3^4 = 81$

Cancel 5 nonzero factors from numerator and denominator. $9-5 = 4$ factors remain.

4. $2^4 = 16$

There are $3+1 = 4$ factors of 2. Their product is 16.

Summer • Worked solutions

5. $3^2 = 9$

Cancel 4 nonzero factors from numerator and denominator. $6-4 = 2$ factors remain.

6. $4^7 = 16384$

There are $3+4 = 7$ factors of 4. Their product is 16384.

7. $3^3 = 27$

Cancel 2 nonzero factors from numerator and denominator. $5-2 = 3$ factors remain.

8. $2^3 = 8$

There are $2+1 = 3$ factors of 2. Their product is 8.

Substitute lesson

Before students arrive

Locate the class schedule, seating plan, emergency procedures, and approved learner supports from the school. This academic packet does not replace those school-specific instructions.

0-5 minutes: settle

Read the goal aloud: Generate equivalent exponential expressions. Let students explain a familiar strategy to a partner.

5-15 minutes: model

Use the worked-example page. Write small powers as repeated factors. Multiplying like bases adds exponents; dividing subtracts them when the base is nonzero.

15-30 minutes: practice

Distribute the next practice page. Students solve independently first, then compare one explanation in pairs. If copying is unavailable, read one question at a time and allow drawings or oral responses.

30-40 minutes: discuss

Use the following key. Ask students to locate the first step where methods diverged; invite a correction supported by a model.

40-45 minutes: handover

Collect one explanation from each student. On the planning page, record which step needs reteaching, who requested help, and what was completed. Use neutral observations, not diagnostic labels.

Substitute lesson • Practice

Show your thinking with a drawing, equation, or explanation. Use the space under each question.

1. Simplify $5^3 \div 5^2$ as one power and evaluate it. Explain by canceling equal factors.

2. Simplify $(5^2)(5^1)$ as one power and evaluate it. Explain using repeated factors.

3. Simplify $5^6 \div 5^3$ as one power and evaluate it. Explain by canceling equal factors.

4. Simplify $(2^4)(2^2)$ as one power and evaluate it. Explain using repeated factors.

Substitute lesson • Worked solutions

1. $5^1 = 5$

Cancel 2 nonzero factors from numerator and denominator. $3-2 = 1$ factors remain.

2. $5^3 = 125$

There are $2+1 = 3$ factors of 5. Their product is 125.

3. $5^3 = 125$

Cancel 3 nonzero factors from numerator and denominator. $6-3 = 3$ factors remain.

4. $2^6 = 64$

There are $4+2 = 6$ factors of 2. Their product is 64.

Emergency substitute lesson

Before students arrive

Locate the class schedule, seating plan, emergency procedures, and approved learner supports from the school. This academic packet does not replace those school-specific instructions.

0-5 minutes: settle

Read the goal aloud: Generate equivalent exponential expressions. Let students explain a familiar strategy to a partner.

5-15 minutes: model

No copies or devices? Write the first worked example on the board; students use blank paper. Write small powers as repeated factors. Multiplying like bases adds exponents; dividing subtracts them when the base is nonzero.

15-30 minutes: practice

Distribute the next practice page. Students solve independently first, then compare one explanation in pairs. If copying is unavailable, read one question at a time and allow drawings or oral responses.

30-40 minutes: discuss

Use the following key. Ask students to locate the first step where methods diverged; invite a correction supported by a model.

40-45 minutes: handover

Collect one explanation from each student. On the planning page, record which step needs reteaching, who requested help, and what was completed. Use neutral observations, not diagnostic labels.

Emergency substitute lesson • Practice

Show your thinking with a drawing, equation, or explanation. Use the space under each question.

1. Simplify $2^6 \div 2^4$ as one power and evaluate it. Explain by canceling equal factors.

2. Simplify $(4^5)(4^3)$ as one power and evaluate it. Explain using repeated factors.

3. Simplify $2^7 \div 2^3$ as one power and evaluate it. Explain by canceling equal factors.

4. Simplify $(2^3)(2^3)$ as one power and evaluate it. Explain using repeated factors.

Emergency substitute lesson • Worked solutions

1. $2^2 = 4$

Cancel 4 nonzero factors from numerator and denominator. $6-4 = 2$ factors remain.

2. $4^8 = 65536$

There are $5+3 = 8$ factors of 4. Their product is 65536.

3. $2^4 = 16$

Cancel 3 nonzero factors from numerator and denominator. $7-3 = 4$ factors remain.

4. $2^6 = 64$

There are $3+3 = 6$ factors of 2. Their product is 64.

A completed lesson-plan example

Level and focus

Grade 8; NC.8.EE.1; Generate equivalent exponential expressions.

Evidence of learning

Student represents the quantities, selects a valid method, calculates accurately, and explains the result with appropriate units.

Launch / model

Use worked example 1. Ask students to annotate the role of every quantity. Demonstrate the model before moving to symbols.

Guided / independent practice

Use cards 1-4 in pairs; assign classwork independently. Change grouping according to the explanation you hear rather than speed alone.

Formative check

Use the four-question exit ticket. Score each item 0-2: 2 for an accurate result with coherent reasoning, 1 for a sound method with a minor error or an unexplained correct result, 0 for missing or unsupported reasoning.

Next teaching decision

0-3 points: reteach with a concrete model. 4-6: correct the specific misconception with a short example. 7-8: invite a second representation or a student-created problem. These are local instructional decisions, not mastery cutoffs validated by a test publisher.

Plan your next lesson

Date, class, and focus / exact local standard:

What will students do to show understanding?

Launch and worked example:

Guided practice and independent task:

Access supports and extension:

Exit evidence and next lesson decision:

Access, sources, and classroom license

AIG: Invite two methods, a counterexample, or a new task with a specified solution. Ask students to explain limits of a shortcut.

504: Apply the student's plan: breaks, extra time, enlarged print, reduced copying, or alternate response methods as documented.

EC: Use the IEP to select supports. Model one step, offer counters or a diagram, reduce the visible item set, and accept an oral explanation when appropriate.

ESL: Preview quantity, difference, factor, or other relevant terms. Let students rehearse in a home language, then use "I chose ___ because ___." Maintain the mathematical goal.

Official alignment sources • accessed September 15, 2026
