

Factor to Reveal Structure

Grades 9-12 • SAT / ACT mathematics foundations

Advanced Math • Rewrite a quadratic expression as a product.

Original focused skill practice for learners preparing for college-entrance mathematics. Includes models, 16 practice tasks, six explain-and-check tasks, a four-item exit ticket, and worked solutions. Not a full practice exam.

PRINT • TEACH • REVISIT

Plan a focused study session

Learning objective

Rewrite a quadratic expression as a product.

Readiness

Use after learners have studied the relevant algebra, geometry, or data concepts. Grade tags describe a typical preparation audience; readiness depends on prior coursework.

Suggested use

Session 1: 10 minutes on worked examples and 20–30 minutes on practice. Session 2: review errors, then use explain-and-check tasks. Finish with the independent exit ticket. Pause and reteach a prerequisite when the model is not yet understood.

What this resource covers

The named mathematics skill is useful within SAT and ACT preparation. The packet does not cover every exam domain, reproduce an official section, provide standardized timing, or predict a score.

Materials

Pencil, paper, and a calculator for checking when useful. Practice both symbolic reasoning and calculator verification. Follow each exam publisher's current policies for an actual test.

Student directions

Read the entire question, define quantities, show a method, and check the result. For a written explanation, cite the calculation or feature that supports your conclusion.

Two worked examples

Model 1. Factor $x^2 + (6)x + (-16)$ over the integers. Check by expanding.

The constants must add to 6 and multiply to -16. $8+(-2) = 6$, and $8 \times (-2) = -16$.

Model 2. Factor $x^2 + (12)x + (35)$ over the integers. Check by expanding.

The constants must add to 12 and multiply to 35. $5+(7) = 12$, and $5 \times (7) = 35$.

Pause before looking at a solution: which relationship, definition, or constraint determines the first step?

Practice • Show a complete method

Show your thinking with a drawing, equation, or explanation. Use the space under each question.

1. Factor $x^2 + (16)x + (64)$ over the integers. Check by expanding.

2. Factor $x^2 + (0)x + (-16)$ over the integers. Check by expanding.

3. Factor $x^2 + (8)x + (16)$ over the integers. Check by expanding.

Practice • Show a complete method

Show your thinking with a drawing, equation, or explanation. Use the space under each question.

4. Factor $x^2 + (15)x + (54)$ over the integers. Check by expanding.

5. Factor $x^2 + (1)x + (-72)$ over the integers. Check by expanding.

6. Factor $x^2 + (12)x + (35)$ over the integers. Check by expanding.

Practice • Show a complete method

Show your thinking with a drawing, equation, or explanation. Use the space under each question.

7. Factor $x^2 + (11)x + (30)$ over the integers. Check by expanding.

8. Factor $x^2 + (-3)x + (-40)$ over the integers. Check by expanding.

9. Factor $x^2 + (14)x + (48)$ over the integers. Check by expanding.

Practice • Show a complete method

Show your thinking with a drawing, equation, or explanation. Use the space under each question.

10. Factor $x^2 + (14)x + (45)$ over the integers. Check by expanding.

11. Factor $x^2 + (-3)x + (-10)$ over the integers. Check by expanding.

12. Factor $x^2 + (15)x + (54)$ over the integers. Check by expanding.

Practice • Show a complete method

Show your thinking with a drawing, equation, or explanation. Use the space under each question.

13. Factor $x^2 + (10)x + (16)$ over the integers. Check by expanding.

14. Factor $x^2 + (-2)x + (-63)$ over the integers. Check by expanding.

15. Factor $x^2 + (12)x + (32)$ over the integers. Check by expanding.

Practice • Show a complete method

Show your thinking with a drawing, equation, or explanation. Use the space under each question.

16. Factor $x^2 + (12)x + (35)$ over the integers. Check by expanding.

Explain and check • Transfer practice

Solve the task, then explain a check or limitation. Compare your reasoning with the worked key only after making your own attempt.

1. Factor $x^2 + (10)x + (21)$ over the integers. Check by expanding.

2. Factor $x^2 + (-5)x + (-24)$ over the integers. Check by expanding.

Explain and check • Transfer practice

Solve the task, then explain a check or limitation. Compare your reasoning with the worked key only after making your own attempt.

3. Factor $x^2 + (11)x + (30)$ over the integers. Check by expanding.

4. Factor $x^2 + (10)x + (24)$ over the integers. Check by expanding.

Explain and check • Transfer practice

Solve the task, then explain a check or limitation. Compare your reasoning with the worked key only after making your own attempt.

5. Factor $x^2 + (-3)x + (-18)$ over the integers. Check by expanding.

6. Factor $x^2 + (9)x + (18)$ over the integers. Check by expanding.

Exit ticket • Independent check

Complete independently. Show reasoning and any relevant restriction. This is a classroom learning check, not a standardized test score.

1. Factor $x^2 + (12)x + (35)$ over the integers. Check by expanding.

2. Factor $x^2 + (-4)x + (-45)$ over the integers. Check by expanding.

Exit ticket • Independent check

Complete independently. Show reasoning and any relevant restriction. This is a classroom learning check, not a standardized test score.

3. Factor $x^2 + (10)x + (16)$ over the integers. Check by expanding.

4. Factor $x^2 + (10)x + (21)$ over the integers. Check by expanding.

Practice worked solutions

1. $(x + (8))(x + (8))$

The constants must add to 16 and multiply to 64. $8+(8) = 16$, and $8 \times (8) = 64$.

2. $(x + (4))(x + (-4))$

The constants must add to 0 and multiply to -16. $4+(-4) = 0$, and $4 \times (-4) = -16$.

3. $(x + (4))(x + (4))$

The constants must add to 8 and multiply to 16. $4+(4) = 8$, and $4 \times (4) = 16$.

4. $(x + (6))(x + (9))$

The constants must add to 15 and multiply to 54. $6+(9) = 15$, and $6 \times (9) = 54$.

Practice worked solutions

5. $(x + (9))(x + (-8))$

The constants must add to 1 and multiply to -72. $9 + (-8) = 1$, and $9 \times (-8) = -72$.

6. $(x + (7))(x + (5))$

The constants must add to 12 and multiply to 35. $7 + (5) = 12$, and $7 \times (5) = 35$.

7. $(x + (6))(x + (5))$

The constants must add to 11 and multiply to 30. $6 + (5) = 11$, and $6 \times (5) = 30$.

8. $(x + (5))(x + (-8))$

The constants must add to -3 and multiply to -40. $5 + (-8) = -3$, and $5 \times (-8) = -40$.

Practice worked solutions

9. $(x + (6))(x + (8))$

The constants must add to 14 and multiply to 48. $6+(8) = 14$, and $6\times(8) = 48$.

10. $(x + (5))(x + (9))$

The constants must add to 14 and multiply to 45. $5+(9) = 14$, and $5\times(9) = 45$.

11. $(x + (2))(x + (-5))$

The constants must add to -3 and multiply to -10. $2+(-5) = -3$, and $2\times(-5) = -10$.

12. $(x + (9))(x + (6))$

The constants must add to 15 and multiply to 54. $9+(6) = 15$, and $9\times(6) = 54$.

Practice worked solutions

13. $(x + (2))(x + (8))$

The constants must add to 10 and multiply to 16. $2+(8) = 10$, and $2 \times (8) = 16$.

14. $(x + (7))(x + (-9))$

The constants must add to -2 and multiply to -63. $7+(-9) = -2$, and $7 \times (-9) = -63$.

15. $(x + (8))(x + (4))$

The constants must add to 12 and multiply to 32. $8+(4) = 12$, and $8 \times (4) = 32$.

16. $(x + (5))(x + (7))$

The constants must add to 12 and multiply to 35. $5+(7) = 12$, and $5 \times (7) = 35$.

Transfer worked solutions

1. $(x + (3))(x + (7))$

The constants must add to 10 and multiply to 21. $3+(7) = 10$, and $3 \times (7) = 21$.

2. $(x + (3))(x + (-8))$

The constants must add to -5 and multiply to -24. $3+(-8) = -5$, and $3 \times (-8) = -24$.

3. $(x + (6))(x + (5))$

The constants must add to 11 and multiply to 30. $6+(5) = 11$, and $6 \times (5) = 30$.

4. $(x + (6))(x + (4))$

The constants must add to 10 and multiply to 24. $6+(4) = 10$, and $6 \times (4) = 24$.

Transfer worked solutions

5. $(x + (3))(x + (-6))$

The constants must add to -3 and multiply to -18. $3 + (-6) = -3$, and $3 \times (-6) = -18$.

6. $(x + (6))(x + (3))$

The constants must add to 9 and multiply to 18. $6 + (3) = 9$, and $6 \times (3) = 18$.

Exit-ticket worked solutions

1. $(x + (5))(x + (7))$

The constants must add to 12 and multiply to 35. $5+(7) = 12$, and $5 \times (7) = 35$.

2. $(x + (5))(x + (-9))$

The constants must add to -4 and multiply to -45. $5+(-9) = -4$, and $5 \times (-9) = -45$.

3. $(x + (2))(x + (8))$

The constants must add to 10 and multiply to 16. $2+(8) = 10$, and $2 \times (8) = 16$.

4. $(x + (7))(x + (3))$

The constants must add to 10 and multiply to 21. $7+(3) = 10$, and $7 \times (3) = 21$.

Use errors to choose the next step

Identify the first mismatch

Compare the student's representation with the quantities or stated condition. Separate reading the situation, choosing a method, calculation, and interpretation.

Respond precisely

If the model is wrong, use a simpler example before repeating the procedure. If the method is sound and arithmetic is wrong, correct that step and verify the original result.

Review the exit ticket

For each item: 2 points for an accurate result with coherent reasoning; 1 for a sound method with a minor error or an unexplained correct answer; 0 for unsupported or missing reasoning. Use comments to select a next action. These are local instructional criteria.

AIG

Compare two methods, construct a counterexample, or create a new problem with a prescribed solution and justify its restrictions.

504 / EC

Follow the individual plan. Offer manageable item groups, documented time or format supports, a worked step, or an alternate response method while retaining the mathematical objective.

ESL

Preview terms and symbols in the questions. Use home-language rehearsal or a bilingual glossary, then ask for a concise explanation such as "The condition means ___, so I used ___."

Sources, preparation, and license

Objective: Rewrite a quadratic expression as a product. State alignment: not claimed. This is a focused college-entrance preparation resource, not a state course or a claim of course equivalency.
